

sliding eyelet and bolt fastening apparatus allowing the dispensers to be removably secured to a supporting wall or structure or suspending the dispenser 10 over a shower spray head using a cord or rope.

As illustrated in the perspective of Figure 6, another embodiment of the dispenser 10 is shown having a horizontal configuration although other and different exterior configurations may be used as desired. Dispenser 10 includes an upper shelf 82 that extends the top surface of the dispenser 10 from the upper front edge 63 and a lower shelf 80 that extends from the lower front edge 61. The lower shelf 80 contains a ridged surface 84, as is commonly found in many soap trays, to permit slip-free, relatively dry storage of soap and other toiletries. The upper shelf 82 contains partitions 83 located around the array of flexible fingers forming a grommet like member defining an opening 40 for secure storage of a variety of bathing supplies, such as soap, shampoo, conditioner, washcloths, etc. The upper shelf 82 and lower shelf 80 also contain drains 85 consisting of holes or tunnels in the partitions 83 and ridged surface 84 to remove the water from such surfaces. The dispenser also has a hook 87 for holding hand towels and/or washcloths. The upper shelf 82 and lower shelf 80 also act to deflect some of the water from a shower head away from the tissues dispensed by the dispenser 10.

The preceding description of the invention has shown and described certain embodiments thereof; however, it is intended by way of illustration and example only and not by way of limitation. Those skilled in the art should understand that various changes, omissions and additions may be made to the invention without departing from the spirit and scope of the invention.

## CLAIMS

I claim:

1. A bathroom dispenser for dispensing bath supplies comprising:
  - a) a body having front, back, side, top and bottom walls defining said dispenser; and
  - b) at least one dispenser station and at least one disposal station within said dispenser, wherein each of said dispenser stations has at least one dispensing orifice in one of the walls of each of said dispenser stations for dispensing bath supplies and wherein each

of said disposal stations has at least one opening in one of the walls of each of said disposal stations for disposing of said bath supplies.

2. A bathroom dispenser for dispensing bath supplies comprising:

a) a body having front, back, side, top and bottom walls defining said dispenser; and

b) at least one internal wall defining at least one dispenser station and at least one disposal station within said dispenser, wherein each of said dispenser stations has at least one dispensing orifice in one of the walls of each of said dispenser stations for dispensing bath supplies and wherein each of said disposal stations has at least one opening in one of the walls of each of said disposal stations for disposing of said bath supplies.

3. That dispenser described in claim 2 wherein said dispenser has one substantially vertical internal wall defining one dispenser station and one disposal station.

4. That dispenser described in claim 3 wherein a single opening is located in the top wall or bottom wall of said disposal station and a single dispensing orifice is located in the top wall or bottom wall of said dispenser station.

5. That dispenser described in claim 4 wherein said opening is covered by a membrane.

6. That dispenser described in claim 3 wherein said dispenser has at least one pivotable door for accessing said dispenser station and said disposal station.

7. That dispenser described in claim 6 wherein said dispenser station has one pivotable door located in the bottom wall of said dispenser station and said disposal station has one pivotable door located in the bottom wall of said disposal station and one pivotable door located in the top wall of said disposal station.

8. That dispenser described in claim 3 wherein said bath supplies are tissues dispensed from a tissue cartridge located in said dispenser station.

9. That dispenser described in claim 3 wherein said disposal station contains a disposal container with a refuse opening wherein said refuse opening is located toward a wall of said dispenser having an opening in said disposal station.

10. That dispenser described in claim 2 wherein said dispenser has one substantially horizontal internal wall defining one dispenser station and one disposal station.

11. That dispenser described in claim 10 wherein said one horizontal wall defines said disposal station above said horizontal wall and said dispenser station below said horizontal wall and wherein a single opening is located in the top wall of said disposal station and a single dispensing orifice is located in the bottom wall of said dispenser station.

12. That dispenser described in claim 11 wherein said opening is covered by a membrane.

13. That dispenser described in claim 10 wherein said dispenser has at least one pivotable door for accessing said dispenser station and said disposal station.

14. That dispenser described in claim 13 wherein one pivotable door is located in the bottom wall of said dispenser station and one pivotable door is located in one of the side walls of said disposal station.

15. That dispenser described in claim 10 wherein said bath supplies are tissues dispensed from a tissue cartridge located in the dispenser station.

16. That dispenser described in claim 10 wherein said disposal station contains a disposal container with a refuse opening wherein said refuse opening is located toward a wall of said dispenser having an opening in said disposal station.

17. That dispenser described in claim 1 wherein said top wall and said bottom wall extend in a substantially perpendicular manner beyond said front wall of said dispenser.

18. That dispenser described in claim 1 wherein said dispenser has a single cartridge located inside said dispenser wherein said cartridge has dispenser and disposal sections, wherein said dispenser section dispenses said bath supplies through a cartridge dispensing orifice located toward a wall of said dispenser having a dispensing orifice and said disposal section disposes of said bathing supplies through a cartridge opening located toward a wall of said dispenser having an opening.

19. That dispenser described in claim 18 wherein said opening is located in the top wall or the bottom wall of said disposal station of said dispenser and said dispensing orifice is located in the bottom wall of said dispenser station of said dispenser.

20. That dispenser described in claim 1 wherein said dispenser is comprised of two dispenser stations and a single disposal station, each of said dispenser sections having a cartridge located inside each of said dispenser stations for dispensing bath supplies, wherein said bath

supplies dispensed from the first cartridge in the first dispenser station are tissues and said bath  
supplies dispensed from the second cartridge in the second dispenser station are towelettes.
